

OLEG DIDECHKIN

Fullstack Developer, React/Node/TypeScript, 4+ years of experience

oleg.didechkin@gmail.com • [LinkedIn](#) • [GitHub](#) • UTC+2

ABOUT

Fullstack developer (TypeScript, React/Next.js, Node.js) with 4+ years of commercial experience across consumer products, internal tools, and the occasional Web3 integration. I gravitate toward work that makes the team faster: performance optimization, build tooling, and libraries that hold up six months later. Comfortable bootstrapping a new project from scratch or going deep into an existing codebase, including less typical work like canvas-based editors.

EXPERIENCE

3look

04/2024 — Present

- Extended a Konva canvas editor where users compose animated GIFs by placing curated or custom-uploaded faces onto templates. Shipped custom uploads, text editing, and recently-used assets, plus fixes for cross-browser and device-specific UX bugs.
- Led a monorepo performance and DX cleanup. Retuned tsconfigs to fix TS server stalls in the shared backend package, and pruned bundles via next/bundle-analyzer and knip, which unblocked shared-package work and sped up pages.

Technologies: TypeScript, React, Next.js, Konva, Tailwind, NestJS, Docker, PostgreSQL, Prisma.

Pragmatic DLT

04/2023 — 03/2024

- Built a battery lifecycle management web app from scratch for an outsourced client, used by their team to manage orders and by their customers to track repair, recycling, and renewal status.
- Designed a natural-language movie search tool. OpenAI rewrote user queries into Elasticsearch queries against a corpus of dialog transcripts, letting users search by what was said rather than by title.

Technologies: TypeScript, React, Next.js, tRPC, Tailwind, Docker, Elasticsearch.

dZENcode

09/2022 — 04/2023

- Created a gRPC microservice that scraped data from an external source and used the OpenAI API to generate email drafts delivered through Outlook. It was the team's first step toward incorporating LLM-driven workflows into their backend.

Technologies: TypeScript, Node, Python, Django.

EDUCATION

National Aerospace University Kharkiv Aviation Institute, Ukraine

2023 — 2024

Master — Computerization of information processing and management

National Aerospace University Kharkiv Aviation Institute, Ukraine

2020 — 2023

Bachelor — Computer Science

SKILLS

Frontend: React, Next.js, TypeScript, Tailwind, shadcn/ui, Radix, CSS Modules/SCSS

State & data: Zustand, TanStack Query, MobX, React Context

Backend: Node.js, NestJS, tRPC, Next.js API routes & Server Actions, REST

Databases: PostgreSQL, Prisma, Redis

Infra & DevOps: Vercel, DigitalOcean, Docker, GitHub Actions, Nginx

Other: Canvas/Konva (custom editing system), Lottie animations, Telegram bots, wagmi, viem, Ethereum smart contracts & wallet integrations, Git, Husky
