

OLEG DIDECHKIN

Fullstack Developer, React/Node.js/TypeScript, 5 years of experience

oleg.didechkin@gmail.com • [LinkedIn](#) • [GitHub](#) • UTC+2

ABOUT

Fullstack developer (TypeScript, React/Next.js, Node.js/NestJS) with 5 years in commercial product teams, working alongside other developers, designers and QA. Functional, declarative React, and Node services built the same way — small pieces, clear structure, code that's easy for the next person to pick up.

Comfortable owning an app end to end: requirements, schema, API, deploys. Performance and build tooling are a focus area, as are LLM-backed features, which I've shipped to production since 2021.

EXPERIENCE

3look

10/2023 — Present

- Led a tech-debt push across the monorepo: tsconfig rework took TypeScript feedback in the shared backend package from **~5s** to sub-second, next/bundle-analyzer and knip cut first-load JS **240 kB** to **105 kB (-56%)**, and moving images off next/image to S3 behind CloudFront took **~\$400/month** off the Vercel bill.
- Owned feature work on a Konva-based canvas editor: custom uploads, in-canvas text editing and a recently-used asset system, then stabilized rendering and touch input across browsers and mobile Safari. Lifted Lighthouse performance score from **55** to **92** with lazy-loading and SSR.
- Shipped white-label partner pages on per-brand subdomains: shared CSS variable base plus per-brand overrides, so a new brand is a variables file rather than new components. **25** brands live, **5** with full reskins.

Pragmatic DLT

08/2022 — 09/2023

- Took a battery lifecycle management platform from scratch to production: scoped the MVP with a non-technical client, designed the schema and API, developed a Kanban board for shipping status and server-side PDF generation. Zero-downtime containerized deploys cut release time from **15 min** to **3 min**.
- Built natural-language search over a dialog-transcript catalog in Elasticsearch. OpenAI function calling turned free-text questions into structured queries, raising execution accuracy from **~30%** to **~76%**.

dZENcode

09/2021 — 07/2022

- Automated outbound lead generation: scraped freelance job boards, drafted a tailored pitch per posting with the OpenAI API, sent from Outlook. Roughly **doubled** reply rate against the static template it replaced.
- Shipped reusable React components on a language-learning platform and cut rendering cost by breaking up oversized component trees and memoizing hot paths, landing Interaction to Next Paint at **~180ms**.

EDUCATION

National Aerospace University Kharkiv Aviation Institute, Ukraine

2023 — 2024

Master — Computerization of information processing and management

National Aerospace University Kharkiv Aviation Institute, Ukraine

2020 — 2023

Bachelor — Computer Science

SKILLS

Frontend: React, Next.js, TanStack Query, MobX, Zustand, Vite, Webpack, Tailwind, SCSS, shadcn/ui

Backend: Node.js, NestJS, Express, REST, WebSockets, PostgreSQL, MongoDB, Redis, Prisma, tRPC

Infra & DevOps: Docker, GitHub Actions, CircleCI, Turborepo, AWS (EC2, S3, CloudFront, RDS, Lambda), Vercel, DigitalOcean, Nginx, pm2

AI/LLM: OpenAI API, function calling, LLM feature integration

Other: JavaScript, TypeScript, Python, Elasticsearch, Konva/Canvas, CSS variables/design tokens, OAuth2/JWT, Git
