

OLEG DIDECHKIN

Fullstack Developer, React/Node.js/TypeScript, 5 years of experience

oleg.didechkin@gmail.com • [LinkedIn](#) • [GitHub](#) • UTC+2

ABOUT

Full-stack developer (TypeScript, React/Next.js, Node.js/NestJS) with 5 years in commercial teams, building product features end to end and shipping LLM-backed functionality to production since 2021. Comfortable owning a product from schema to deployment, and equally at home going deep in a mature codebase, including the performance and build-tooling work that keeps one fast.

EXPERIENCE

3look

10/2023 — Present

- Owned feature work on a Konva-based canvas editor where users compose animated GIFs from face assets layered onto templates. Shipped custom uploads, in-canvas text editing and a recently-used asset system, then stabilized rendering and touch input across browsers and mobile Safari.
- Led a monorepo performance and DX overhaul: restructured tsconfigs to take TypeScript server feedback in the shared backend package from ~5s to sub-second, unblocking shared-package work for the team, and cut first-load JS 240 kB → 105 kB (-56%) with next/bundle-analyzer and knip. Containerized the monorepo.

Pragmatic DLT

08/2022 — 09/2023

- Battery lifecycle management platform, built from scratch and run in production by the client to manage order fulfillment, repairs, recycling and renewals. Owned it end to end: requirements gathering with a non-technical client, schema and API design, frontend, deployment.
- Built a natural-language search layer over a large dialog-transcript catalog. OpenAI rewrote free-text queries into structured Elasticsearch queries, so users could find titles by what was said on screen rather than by title or metadata.

dZENcode

09/2021 — 07/2022

- Automated outbound lead generation service which scraped freelance work boards for postings and utilized the OpenAI API to generate customized outreach emails for every poster, sent from Outlook.
- Shipped and maintained React UI features for a language learning platform, working with a senior developer and designers on reusable components and rendering performance.

EDUCATION

National Aerospace University Kharkiv Aviation Institute, Ukraine

2023 — 2024

Master — Computerization of information processing and management

National Aerospace University Kharkiv Aviation Institute, Ukraine

2020 — 2023

Bachelor — Computer Science

SKILLS

Frontend: React, Next.js, TypeScript, Tailwind, shadcn/ui, SCSS

State & data: Zustand, TanStack Query, MobX

Backend: Node.js, NestJS, tRPC, REST, OAuth2, Next.js API routes & Server Actions

Databases: PostgreSQL, Prisma, Redis

AI/LLM: OpenAI API, LLM feature integration, agentic coding tools

Infra & DevOps: Docker, CI/CD (GitHub Actions, CircleCI), Vercel, AWS, DigitalOcean, Nginx

Other: Konva/Canvas, Lottie, Elasticsearch, Python, Telegram bots, wagmi/viem, Ethereum smart contracts
